        Python3 Homework1_bgm210001.py data/data.csv

write a couple of sentences describing the strengths/weaknesses of Python for text processing, in your opinion

Python is a fun and easy language for working with text. It has lots of helpful tools that make it simple to do things like counting words and finding patterns in text. However, it can take a little bit longer for Python to process big amounts of text compared to some other languages. But with practice, you'll be able to do amazing things with text in no time!

write a couple of sentences describing what you learned in this assignment, or what was a review for you

The program asks for your employee ID and phone number before adding the information to a list of employees that is displayed at the program's finish. It also gives you an idea of the program's basic operations. talents in communication In today's technologically advanced culture, it is essential to be able to communicate technical concepts in a way that is clear to a broad audience.
